

DAY BACKEND

EXPRESS JS

Express JS is a framework manages everything from receiving the req to giving the response.

Routing:

`app.get()` — get request

Middleware

`app.get(req, res, next)`
`next()` - to forward the request to routes

Error Handling

Express has a special route for error handling

```
app.use(function(err, req,  
res, next){
```

```
  console.error(err.stack)  
}
```
